

Vice to make square

Serie 30V Mordaza para escuadrar

- ✓ Las bocas tienen efecto descendente; por su geometría, al apretar la pieza hacen que esta descienda.
Jaws with descending effect. Due to its geometry, when the part is tighten it goes down.

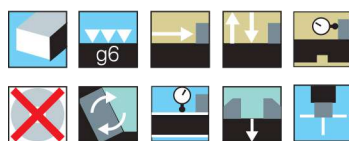

- ✓ Perpendicularidad negativa de las bocas de 0,025 a 0,04 mm. Las bocas se fabrican con un ángulo negativo para compensar las deformaciones durante el apriete.
Negative perpendicular alignment of the jaws from 0.025 to 0.04 mm. Jaws are made in negative angle in order to countertrack the deformation during the tightening.

- ✓ Aprietes intercambiables: mecánico, hidráulico con multiplicador o apriete oleoneumático.
Interchangeable spindle: mechanical, hydraulic or with mechanical multiplier.
